

## Scope and Sequence 2007/'08

Subject/Title of Unit	Grade	6 Weeks	Estimated Time Frame (# of days)
Pre Calculus <u>*Chapter 1</u> Functions and Their Graphs	11-12	1 <sup>st</sup>	12 days
TEKS/Student Expectations		Examples/Specifications:	
<p><i>The student defines functions, describes characteristics of functions, and translates among verbal, numerical, graphical, and symbolic representations of functions, including polynomial, rational, radical, exponential, logarithmic, trigonometric, and piecewise-defined functions. The student is expected to:</i></p> <p>P.1.A – describe parent functions symbolically and graphically, including <math>y = x^n</math>, <math>y = \ln x</math>, <math>y = \log_a x</math>, <math>y = x^{\frac{1}{n}}</math>, <math>y = e^x</math>, <math>y = a^x</math>, etc</p> <p>P.1.B – determine the domain and range of functions using graphs, tables, and symbols</p> <p>P.1.C – describe symmetry of graphs of even and odd functions</p> <p>P.1.D – recognize and use connections among significant points of a function (roots, maximum points, and minimum points), and the graph of a function.</p> <p><i>The student interprets the meaning of the symbolic representations of functions and operations on functions within a context. The student is expected to:</i></p> <p>P.2.A – apply basic transformations, including <math>a \cdot f(x)</math>, <math>f(x) + d</math>, <math>f(x - c)</math>, <math>f(b \cdot x)</math>, <math> f(x) </math>, <math>f( x )</math>, to the parent functions.</p> <p>P.2.B – perform operations including composition on functions, and find inverses.</p> <p><i>The student uses functions and their properties to model and solve real-life problems. The student is expected to:</i></p> <p>P.3.A – investigate identities graphically and verify them symbolically, including logarithmic properties, trigonometric identities, and exponential properties</p> <p>P.3.B – use functions such as logarithmic, exponential, trigonometric, polynomial, etc. to model real-life data</p> <p>P.3.C – use regression to determine a function to model real-life data</p> <p>P.3.D – use properties of functions to analyze and solve problems and make predictions</p>		<ul style="list-style-type: none"> <li>✓ Student will be able to define characteristics and representations of a function.</li>   <li>✓ Student will be able to identify intercepts and symmetry using tables, rules of algebra, drawing and using graphs.</li> <li>✓ Student will be able to use the graph of a function to determine the key elements of that function.</li> <li>✓ Student will be able to identify the characteristics of the most commonly used functions in algebra.</li> <li>✓ Student will be able to determine if the inverse of a function exists and how to represent it graphically and algebraically.</li>   <li>✓ Student will be able to write equations to model real-world data and identify different models of variation.</li> </ul>

<p><i>The student defines functions, describes characteristics of functions, and translates among verbal, numerical, graphical, and symbolic representations of functions, including polynomial, rational, radical, exponential, logarithmic, trigonometric, and piecewise-defined functions. The student is expected to:</i></p> <p>P.1.B – determine the domain and range of functions using graphs, tables, and symbols</p> <p>P.1.D – recognize and use connections among significant points of a function (roots, maximum points, and minimum points), the graph of a function, and the symbolic representation of a function.</p> <p>P.1.E – investigate continuity, end behavior, vertical and horizontal asymptotes, and limits and connect these characteristics to the graph of a function.</p> <p>The student interprets the meaning of the symbolic representations of functions and operations on functions within a context. The student is expected to:</p> <p>P.2.C – ) investigate identities graphically and verify them symbolically, including logarithmic properties, trigonometric identities, and exponential properties</p> <p>The student uses conic sections, their properties, and parametric representations to model physical situations. The student is expected to:</p> <p>P.5.A – use conic sections to model motion, such as the graph of velocity vs. position of a pendulum</p> <p><i>P.5 B – use properties of conic sections to describe physical phenomena such as the reflective properties of light and sound.</i></p>		<p>Student will be able to find the angle of inclination of a line and the Distance between a point and a line.</p> <p>Student will be able to recognize each conic section and solve problems involving parabolas.</p> <p>Student will be able to solve problems involving ellipses.</p> <p>Student will be able to solve problems involving hyperbolas and classify a conic section on the basis of its general equation.</p> <p>Student will be able to write equations to describe the motion of a point in a plane.</p> <p>Student will be able to describe the position of a point in a plane using Distance and angle rather than <math>x</math>- and <math>y</math>- coordinates.</p> <p>Student will be able to sketch graphs of polar equations.</p> <p>Student will be able to represent conic sections in polar coordinates.</p>
